Executive Summary	v
-------------------------	---

A. An 8 GeV Synchrotron-Based Proton Driver

1. Introduction	
1.1. Overview	1-1
1.2. PD2 vs. PD1	1-2
1.3. PD2 vs. the Present Booster	1-3
References	1-4
2. Machine Layout and Performance	
2.1. Overview	2-1
2.2. Siting	2-4
2.3. Major design parameters	2-4
2.5. Operation modes	2-7
3. Optics	
3.1. Requirements, constraints, and features	3-1
3.2. Lattice description	3-3
3.3. Analysis	3-7
3.4. Alternative designs	3-19
References	3-21
4. Beam Dynamics	
4.1. Space charge and beam stability	4-1
4.2. Longitudinal dynamics	4-8
References	4-11
5. Technical Systems	
5.1. RF	5-1
5.2. Magnets	5-8
5.3. Power supplies	5-21
5.4. Vacuum	5-24
5.5. Control system	5-26
6. Beam Loss, Collimation and Shielding	
6.1. Beam loss and shielding design strategy	6-1
6.2. Collimation system	6-2
6.3. Radiation analysis	6-7
References	6-11
7. Injection and Extraction	

7.1. Injection	7-1
7.2. Extraction	7-11
References	7-15
 8. H Source and Linac Improvements and Upgrade	
8.1. Introduction	8-1
8.2. Low energy improvements	8-2
8.3. Side-coupled cavity modules from 400 MeV to 600 MeV	8-5
8.4. New beam diagnostics and control requirements	8-8
8.5. Shielding issues	8-9
8.6. Recent measurements of the losses in the linac	8-9
Appendix. 402 MHz low-energy linac replacement	8-10
References	8-12
 9. 600-MeV and 8-GeV Beam Transport Lines	9-1
 10. Civil Construction	
10.1. Introduction	10-1
10.2. Overview	10-1
10.3. Detailed facilities descriptions	10-2
10.4. Civil construction issues for linac extension	10-5
10.5. Civil construction schedule	10-5
 11. Environment, Safety and Health Considerations	
11.1. Introduction	11-1
11.2. Overall view of procedure/regulatory matters	11-1
11.3. Environment, safety, and health considerations during construction	11-3
11.4. Environment, safety, and health considerations during operation	11-4
11.5. Summary	11-6
11.6. Need for work on environmental and safety issues	11-7
References	11-8
 12. Future Upgrade	12-1

B. A 2-MW Main Injector and Upgrade of Beamlines

13. Introduction	
13.1. Overview	13-1
13.2. Main Injector modifications and upgrades	13-2
13.3. Beamlines upgrades	13-4
13.4. Conclusion	13-4
 14. Beam Dynamics	
14.1. Space charge and beam stability	14-1

14.2. Longitudinal dynamics	14-6
References	14-11
15. RF Upgrade	
15.1. PD2 rf requirements	15-1
15.2. Existing MI rf system	15-2
15.3. Rf voltage, power, bucket area, and stability	15-2
15.4. Transient beam loading considerations	15-6
15.5. Cavity amplifier upgrade considerations	15-7
15.6. Main Injector rf R&D program	15-10
15.7. Summary of modifications to existing rf cavities	15-11
15.8. Increased ramp and repetition rate	15-12
15.9. Proposal for a new Main Injector rf amplifier/cavity design	15-13
References	15-15
16. Gamma-t Jump System	
16.1. System description and lattice layout	16-1
16.2. Pulsed quadrupole	16-4
16.3. Power supplies	16-13
16.4. Beam pipes	16-15
16.5. Controls	16-15
References	16-16
17. Large Aperture Quadrupole	17-1
18. Passive Damper and Active Feedback	
18.1. Rf cavity passive spurious mode damping	18-1
18.2. Longitudinal feedback and damping	18-1
19. Radiation, Shielding and Collimation	
19.1. Radiation and shielding	19-1
19.2. Collimation	19-5
References	19-7
20. Upgrade of Other Technical Systems	
20.1. Magnets	20-1
20.2. Power supplies	20-2
20.3. Mechanical and utility	20-5
20.4. Kickers	20-6
20.5. Beam abort dump	20-8
20.6. Controls	20-10
References	20-11
21. Upgrade of Beamlines	
21.1. NuMI beamline	21-1

21.2. MiniBooNE beamline	21-7
21.3. Meson, neutrino, and proton external beam areas	21-11

Appendix 1. Cost Estimates

A1.1. Introduction	A-1
A1.2. Cost estimate of a synchrotron-based 8 GeV Proton Driver	A-1
A1.3. Cost estimate of the Main Injector and beam lines upgrades	A-2

Appendix 2. R&D Program

A2.1. R&D for the synchrotron-based 8 GeV Proton Driver	A-5
A2.2. R&D for the Main Injector Upgrade	A-6

Appendix 3. Charge from the Director

A-7
